A time-saving procedure to create natural esthetics in posterior restorations

By Ivoclar Vivadent AG

A flowable bulk-fill composite complements the existing Tetric N-Ceram Bulk Fill. For many years, the universal composite Tetric N-Ceram has been proven successful in restorative dentistry. As part of the ongoing development of restorative materials, a further innovation is now launched on the market: Tetric N-Flow Bulk Fill.

The new flowable composite complements the mouldable Tetric N-Ceram Bulk Fill composite. In essence, Tetric N-Flow Bulk Fill is based on the composition of Tetric N-Ceram Bulk Fill. The material is applied as a bulk-fill base in Class I and Class II restorations just like the existing version, it can be light-cured in large increments of up to four millimetres,
Composite lies in the Aessencio technology.

Ivocerin light initiator and Aessencio technology

Another strength of the new composite lies in the Aessencio technology.

Time savings of up to 55%
User studies have shown that clinicians can save up to 55% of the time required for the incremental technique if they use a bulk-fill material (with Tetric N-Flow and Tetric N-Ceram).

Ivocerin light initiator and Aessencio technology

Aessencio technology enables composite increments up to a thickness of 4 mm to be cured, while at the same time a low dentin-like translucency can be maintained, allowing, among other things, discoloration tooth structure to be masked. This property makes Tetric N-Flow Bulk Fill the ideal companion for Tetric N-Ceram Bulk Fill, which features an enamel-like translucency. Tetric N-Flow Bulk Fill should be covered with a load-bearing composite (e.g., Tetric N-Ceram Bulk Fill or Tetric N-Ceram). For restorations in deciduous teeth, the material can be applied without a capping layer.

New: Tetric N-Flow Bulk Fill

SMALL CHANGE. BIG DIFFERENCE.

The new imaging plate scanner XIOS Scan completes the intraoral family from Sirona. Whether you’re taking the first steps into the digital world or establishing or updating a fully digital practice, XIOS Scan and XIOS XG Sensors offer perfectly synchronized solutions for every workflow. Enjoy every day. With Sirona.

Direct Restorative in treating function and aesthetics

By Dr. Ian van Lierop

Do we always respect the true role of the anterior dentition? Or do we get caught up in the creation of beauty to the disadvantage of function. In this clinical case we show how the understanding of the entire occlusal complex is critical in establishing a beautiful and stable long-term result. By first creating stable anterior and canine guidance we can protect the dentition and the restorations, adding to long-term stability of both.

Understanding
When faced with obvious aesthetic shortcomings (as in Figure 1) we have to guard against getting caught up in the obvious. Often by looking closer we can identify the true underlying cause. Here the signs of abfraction, loss of posterior support through molar erosion and the lack of canine guidance (Figure 2 and 3) had played a critical role in the eventual wear and chipping of the anterior teeth (Figure 4), part of the initial aesthetic complaint.

Function
To establish a stable aesthetic result, it is essential that we stabilize the occlusion first. This was achieved by systematically restoring the palatal anatomy of the anterior teeth (Figure 5 and 6) using direct restoratives (Filtek™ Supreme XTE A2B) thereby creating total occlusal contact and stability (Figure 8).

Aesthetics
3 months after the occlusion had been stabilized, anterior aesthetics was created following a digitally designed plan (Figure 9). By transfering the digital plan to an analogue model we could create stents to guide in the aesthetic restoration (Figure 10). By using Filtek™ Supreme XTE (shade A2B and A1E) in a layering technique a beautiful result was achieved (Figure 11 and 12). Realizing the ultimate goal of achieving protective function and long-term aesthetics.

Professional development with 3M™ Health Care Academy

By 3M

The Dentistry in Practice event held in Warsaw in May, offered through the 3M™ Health Care Academy, was dedicated to all dentists seeking practical tips to solve daily problems in their practices. Throughout the event participating international dental practitioners had the opportunity to share their most successful techniques and newest science that allows dentists to overcome their everyday challenges.

Science in and around us
The International Science Knowledge Solutions Expert Meeting in Warsaw hosted 20 specialized sessions led by 20 experienced dental professionals within Central Eastern Europe and Middle East and Africa Region. They explored and discussed how science is driving evolutions in dentistry and how it can be applied to one’s daily work. The sessions covered clinical cases and innovative technologies that make it easier to find solutions for better clinical outcomes as well as improve the safety, health and comfort of the patient.

With easy access to the knowledge exchanged by experts on www.dentistryinpractice.com, 3M aims to be a partner in the daily work of dentists, has developed this innovative and convenient exchange of knowledge to improve dental practices through easy-to-apply solutions. This will help specialists to continue their education in a modern way, and to share their learnings and experiences throughout the dental community.

With www.dentistryinpractice.com, 3M helps science to move out of the laboratory and into daily practice for optimal clinical outcomes and the highest patient satisfaction.

Solutions for simplified and better outcomes
Every dentist can be a part of the 3M™ conference, with access to its content online. After registering, our partner dentists will receive notifications every two weeks about new conference video materials, which will be regularly uploaded on dentistryinpractice.com. 3M, aiming to be a partner in the daily work of dentists, has developed this innovative and convenient exchange of knowledge to improve dental practices through easy-to-apply solutions. This will help specialists to continue their education in a modern way, and to share their learnings and experiences throughout the dental community.
