What Happens In Dubai Does Not Have To Stay In Dubai

The American Academy of Implant Dentistry Proudly Presents the 2nd Global Conference in Dubai

By Shankar Iyer

The first Global conference of the AAID was held in New Delhi in 2010 along with the World Congress of Oral Implantology and this time the second Global conference is being held with the 5th Annual Dental Facial Conference. The theme of the Conference is “Pioneering Issues in Implant Dentistry”. World renowned experts will present the state of the art concepts to explore the new horizon surrounding dental implant therapy. What type of soft tissue augmentation work? Which is the best method to grow bone vertically? Is “All on Four” better than traditional hybrid prostheses? Protocols to manage periimplantitis and several other issues will be presented at this conference. I am delighted to work with Dr. Nitin Bhandari who is the Secretary for the congress and has made some significant strides in educating AAID Members in the UAE. We are bringing world class speakers like Drs. Michael Smeeck, Hilt Tatum, Natalee Wong, Mark Lin to name a few. In addition to the main congress expert clinicians will present table clinics to share their tips and techniques with their peers. Graduate students and Academia will proudly be displaying their research through poster presentations.

A hallmark of this congress will be post-conference hands on Advanced Bone grafting course which will feature a separate hard tissue and soft tissue augmentation program. This is a limited participation program that will be a pre-requisite course for the live patient training program later in the year.

I am pleased to invite you to this conference to witness some of the finest in implant dentistry through the Associate Fellow and Fellow programs. This is a limited participation program that will be a pre-requisite course for the live patient training program later in the year. The AAID mission is simple: To advance the science and practice of implant dentistry through education, research support and to serve as the certifying standard for implant dentistry for the benefit of mankind. AAID stands for excellence in education, scientific development and patient care. Members who demonstrate the highest standards in implantology find the AAID to be the organization which supports their clinical and research interests, as well as recognition for their achievements.
