Dental Wings integrates Neodent implants into guided surgery software

By Dental Tribune International

CURIITIBA, Brazil/ MONTEREY, Canada: Dental Wings, international provider of CAD/CAM and guided surgery solutions for dental laboratories and clinics, has announced that it has integrated products from Brazilian implant manufacturer Neodent into its coDiagnostiX software. Through the collaboration, users of the guided surgery software will gain access to Neodent’s implant and sleeve system, consisting of two implant series, three sleeves and one fixation pin.

Neodent is one of the leading dental implant companies in Latin America and targets the nonpremium segment in the implant market, thus making its products accessible to a broader population. According to Matthias Schupp, Neodent’s executive vice president of sales and marketing, the company has sold over 5 million implants to customers worldwide already. Frank Stockmann, vice president of guided surgery at Dental Wings, said that his company is pleased to be able to give its customers access to products from one of the most rapidly expanding implant companies in the world through its coDiagnostiX software. “We are confident that Neodent customers will enjoy the benefits of a sophisticated and user-friendly guided surgery solution,” he added.

Neodent was founded in 1993 and was the first Brazilian company in the implant segment to receive certification from the Brazilian ministry of health. Headquartered in Curitiba in Brazil, the company runs subsidiaries in the U.S., Mexico, Portugal and Spain. Today, Neodent employs more than 900 people, operates more than ten branches in Brazil and works with a wide network of distributors.

In addition to coDiagnostiX, which was acquired from Straumann in 2013, Dental Wings offers an open CAD/CAM platform called DWOS, both of which are aimed at improving the quality of restorations and dental treatment, and increasing the productivity of laboratories and clinicians. The company announced that coDiagnostiX will be fully integrated with the DWOS platform by fall 2014.

New treatment center from Sirona: Quality “made in Germany” at an attractive price

By Sirona

BENZHEIM, Germany: On May 12, Sirona, the global market and technology leader in the dental industry, has introduced a new treatment center: INTEGO offers top quality and flexible configuration options at an attractive price.

All dentists around the world share a common wish: To provide their patients with the best possible treatment. That’s why they ideally want to work with high-quality devices and systems which offer optimum support for their day-to-day work. The treatment center plays a key role here; after all, this is where they spend a large part of their working day. As the global innovation and technology leader in the dental industry, Sirona has developed a new product generation for the treatment center division. This new product line can be very flexibly configured to suit the needs of various practitioners – from the individual practice to the INTEGO “Dentists should not have to forego outstanding quality, innovative features and modern design, depending on how much they can afford to invest in a new center”, explained Michael Gril, Vice President Treatment Centers at Sirona and Managing Director of the Bensheim site in Germany. “INTEGO is a future-proof, high-quality German product which satisfies these demands.”

Top quality and flexible configuration options

The new treatment center comes in two versions: INTEGO and INTEGO pro with extended functionality. Each model can be supplied as a hanging hose model (TS) or with whip arms (CS) in a wide range of shades. Both versions are based on a chair concept which takes the four dimensions of ergonomics into account – intuitive sitting, comfortable positioning, optimum visibility and integrated workflows – and thus ensures that practitioners achieve ideal results. The individual functions, the instruments and all the settings can be simply selected and controlled via intuitive user interfaces. As a comparison, INTEGO pro offers enhanced functionality. Some features, e.g., the 4-way foot switch and the automatic disinfection device, are even included in the basic INTEGO pro model. Furthermore, INTEGO pro offers more optional functions: For example, the customer can choose features such as the ApexLocater.

INTEGO is the perfect complement to the product family

INTEGO is an ideal addition to Sirona’s treatment center product family and fills the gap between CS+ and SINUS. With INTEGO TS and CS versions, the dentist element can be positioned above the patient. In contrast, TENO and SINUS feature a sliding track which positions the dentist element either automatically or manually. As high-end products, SINUS and TENO also offer motorized functions, for example an adjustable headrest, a massage function to ensure patient comfort as well as the option of hand-free operation of the center. As such, Sirona satisfies a wide range of the most diverse requirements made by dentists and patients alike. The treatment centers represent high-quality and proven solutions at an attractive price. As with all other Sirona centers, the INTEGO is also produced in Bensheim, Germany, where it is put through its paces. The long-lasting design, use of high-quality robust materials, product quality “made in Germany” and a focus on ergonomic operating procedures and patient comfort make this a treatment center which is not only future-proof, but also facilitates the everyday working lives of dentists and assistants. INTEGO is available now from dental dealers. More detailed information on the functions and specifications of this treatment center can be found at the official Sirona company website. The price of the INTEGO will vary between 15,000 and 25,000 Euro, depending on individual configuration.

En Español, Speaker/ trainer for Patterson Dental CAD-CAM dentistry leading him on and discover in how you can integrate CEREC Omnicam to your practice.” – Dr. Vasquez. Dr. Vasquez develops his passion for CAD-CAM dentistry leading him to be trainer for Patterson Dental and Sirona Dental Latin America. He has lectured nationally and internationally for Sirona Dental Systems on CEREC On Demand and Training en Español, the digital imprisoning in hospitals to become simple, accurate, and cost effective. Who would have ever imagined that through-out the years dental techniques would become extremely high tech and evolve from the simple onlay restoration to now the most sophisticated implant restorations being created?

“The Omnicam Rocks!” – Dr. Todd Ehrlich

Prof. Alt, the President of the Prosthodontics Group of the International Association for Dental Research (IADR) and the President of the Arab Academy of Esthetic Dentistry (AARAD), will talk about the current aspect in contemporary implant dentistry. He has many publications focusing on implant therapy and basic science in the most respected journals in these fields. His research work about the discovery of biological aging and rejuvenation of implant surfaces was honored by listing under “Images of the Year” by Biomat materials journal. CEREC meets SMILE DESIGN
