Laser is not only an expert medical or dental discipline, but also a technology which, thanks to its versatility, can be applied on its own or in addition to other treatments for a variety of different medical and dental purposes. Moreover, there is not just “the one and only laser”, but lasers of different wavelengths. Since students do not learn anything about laser application during their studies, e.g. that laser application is based on biophysical light-tissue interactions, it is highly important for every responsible dentist to acquire the necessary knowledge about lasers.

Integrative laser technology, applied in responsible dentistry, is a useful and reasonable complement to treatment of patients in most other disciplines, and it often leads to a less painful, minimally invasive and all-round more successful treatment.
